

Jorge Domingues Nunes

Senior Directus / Headless Platform Engineer — Latest Directus 12 · Visual Editor · Monospace · Next.js · Flutter · React Native · PostgreSQL

Pombal, Portugal (remote, CET) | +351 914 764 120 | stamina.nunes@gmail.com | linkedin.com/in/stamina | github.com/staminna | iamjorgenunes.com

SUMMARY

Senior full-stack engineer in Portugal (CET) with **12+ years** of relevant experience and Directus, always on the latest release, as the backbone of production systems. I build my own tooling to accelerate my own performance and delivery. Proactive, approachable and friendly to work with. Across four platforms I have shipped **600+ API endpoints** and **300+ automation flows** on **500+ collections** with multiple relationships and foreign keys, modelled together with the [Directus MCP server](#) I built, with the [Directus Visual Editor](#) set up on Keyprog and MDB Audio so non-technical teams edit live pages in context. On **Monospace**, the next-generation engine from the Directus team, I consolidate several Directus instances and external databases into one platform, with endpoints, webhooks, custom extensions and Flows running in production and operated by AI agents. Clean data models that hold up under integrations, transactional flows with explicit locking and idempotency, and guest-facing apps shipped to the App Store and Play Store. Security background from the European Central Bank, European Commission platforms and SOC 2 / ISO 27001 delivery.

DIRECTUS IN PRODUCTION

- api.romanceinroom.com — Directus 12 (latest) + PostgreSQL e-commerce, 200+ collections, 100+ endpoints, 50+ Flows, 18 custom extensions; Flutter clients
- dev.mdbaudio.com — Directus 12 (latest) + Next.js, ~100 collections, multilingual booking; 100% React, [editable in the Visual Editor](#); Directus Innovation Grant
- team.mdbaudio.com — Directus 12 (latest) team-operations backend, ~110 collections, calendar sync, Visual Editor
- **Keyprog** — B2B/B2C automotive e-commerce on Directus + Next.js + Stripe, 90+ collections, Visual Editor storefront
- **Monospace in production** — the Directus instances above plus external PostgreSQL databases unified in one workspace:

EXPERIENCE

E-commerce Operations & Platform Lead — Romance in Room

2025 – Present

Own D2C adult-wellness store (18+), PT · Directus 12 (latest) + PostgreSQL + Flutter (web, iOS, Android) · Docker on a VPS

- **Platform:** built and run the Directus 12 backend at api.romanceinroom.com for 9,600+ SKUs and 29,000+ images in five languages (PT/EN/ES/FR/IT), with per-product SEO records and Product + Breadcrumb JSON-LD.
- **Data model:** 200+ collections with multiple relationships (M2O, O2M, M2M, translations) and foreign keys, modelled together with my [Directus MCP server](#).
- **Scale:** 100+ API endpoints and 50+ Directus Flows automating orders, payments, stock, notifications and content.
- **18 custom Directus extensions:** API gateway for the Flutter app (token hiding, rate limiting), Firebase Google Sign-In → Directus sessions, pg_trgm typo- and accent-tolerant search (~10k SKUs, <30 ms), orders, vouchers with server-side validation, ifthenpay webhook, Odoo invoicing, dropship and supplier sync, tracking, OneSignal push, profit-margin hook and price-insight panels; roles, policies and ACLs for guest vs. authenticated checkout.
- **Payments & reconciliation:** MB WAY / Multibanco (ifthenpay) webhook that never marks an order paid on the callback alone: status confirmed against the provider's API, amount checked, constant-time key comparison, state-conditional updates and anti-replay checks, failing safe to a 10-minute reconciliation job; Odoo ERP invoicing with idempotency guards.
- **Supplier integration:** dropship order forwarding with an atomic, filtered reservation so concurrent events can't double-order (the guarantee that prevents overbooking), state-gated retries, dry-run mode and audit-kept error records; stock and catalogue sync, 30-minute tracking polling.
- **Order state machine:** pending → paid → preparing → shipped → delivered / cancelled / refunded, with e-mail, push and in-app notifications at every transition.
- **Mature-content compliance:** strict 18+ age gate, cookie consent, privacy / terms, IARC rating and Play / App Store adult-content policy; sole coordinator across six external parties with runbooks and release plans.

Senior Product Engineer — MDB Audio

Jan 2024 – Present

Recording-studio platform — two Directus 12 (latest) instances + Next.js, booking and team operations · Aveiro / Remote

- **Scale:** dev.mdbaudio.com and team.mdbaudio.com together run 210+ collections, 100+ API endpoints and 60+ Directus Flows, with the Visual Editor on both instances.
- **100% React, fully editable:** every page of dev.mdbaudio.com is editable in context in the [Directus Visual Editor](#) at design.varrho.com.
- **Booking platform (dev.mdbaudio.com):** multilingual Directus 12 + Next.js site with studios catalogue, artist showcase and lead capture; embedded self-hosted scheduling with graceful fallback and e-mail confirmations. Received a Directus Innovation Grant.
- **Team operations (team.mdbaudio.com):** two-way Google Calendar ↔ Directus sync for studio scheduling; per-user mailboxes as extensions; agent-driven research pipeline writing verified leads into Directus.
- **AI tooling:** published the [Directus MCP server](#) (29+ tools) so AI agents can query and act on the backend.
- **Backend & delivery:** Node.js / TypeScript, PostgreSQL, Redis; Auth0 (OAuth2 / OIDC, RBAC); Docker Compose parity; unit, integration and e2e suites; Hetzner Linux with git-driven deploys and systemd.

endpoints, webhooks, custom extensions and Flows, operated by AI agents via the per-workspace MCP; typed @monospace/sdk codegen

MCP SERVERS & EXTENSIONS I BUILT

MCP SERVERS

- [@staminna/directus-mcp-server](#) (npm) — Directus 12 items, collections, files, Flows, users and schema; 97%+ test coverage; used to model all 500+ collections
- [cicd-mcp-pipeline](#) (npm) — Docker, SSH-remote and Kubernetes control across local / staging / production
- [ableton-mcp-extended](#) — Ableton Live mixer control in real dB
- AFTER MCP — scrape status and ingestion ops for [after.zone](#)

DIRECTUS EXTENSIONS (28)

- npm: [team-email](#) (per-user SMTP / IMAP inbox) and [typeform](#) (bidirectional sync, Flow operations)
- typeform-conditional-qa — self-hosted bilingual forms with conditional logic
- Romance in Room: 18 (gateway, auth, search, orders, payments, ERP, dropship, push, pricing)
- Keyprog: Flow manager module; WebSocket, content-sync and CSP hooks for the Visual Editor
- CSV mapper (field mapping, relations, images); Segpay payments module

SECURITY & CERTIFIED DELIVERY

- [ECB](#): CSP hardening, rights administration, auditable logging of every CMS operation
- [Co2Offset](#): SOC 2 and ISO 27001 compliance; Bureau Veritas pipeline audit that unlocked €2.5M of business
- Audit trail aligned with ISO/IEC 42001 (Exponent)

Founder & Full-Stack Engineer — AFTER

Jun 2026 – Present

Friends & events platform · Go + SQLite / PostgreSQL + PostGIS + Flutter (iOS, Android, Web) · Docker on Hetzner

- **Multi-source ingestion:** Go backend aggregating Eventbrite, Songkick, Luma, viralagenda, Goabase, Psytrance Portal and Shotgun (license-free sources only) with TTL stale-while-revalidate caching: 58,000+ events across 3,100+ cities behind one JSON / GeoJSON API at [api.after.zone](#).
- **Real-time layer:** WebSocket hub for per-event rooms, private invite-code groups, presence and live-location sharing that is never persisted (in-memory, 2-minute staleness sweep, 3-hour cap); anonymous token identity.
- **Product & ops:** Flutter app with feed, MapLibre map and groups, deep-link invite pages; Next.js ops console, scrape-run dashboards and an MCP tool so AI agents monitor ingestion; test-gated linux/amd64 Docker deploys.

Founder & Fullstack Product Engineer — Exponent

Nov 2025 – Present

- AI/DevOps automation platform in production: FastAPI, React, PostgreSQL, Redis and n8n as Docker microservices; Terraform-managed infrastructure, health probes and graceful shutdown; audit trail aligned with ISO/IEC 42001.

Senior Engineer (Backend & Platform) — Co2Offset.ai

Apr 2023 – Dec 2024

- 400+ containerised Node.js microservice endpoints and 200+ automation workflows (event-driven ingestion, CI/CD, ETL) on Kubernetes; PostgreSQL / PostGIS, MongoDB, Redis; AWS with Terraform and Ansible; Stripe payments; React Native / Expo app on both stores.
- Worked directly with the European Space Agency on requirements; led the Bureau Veritas pipeline audit that unlocked €2.5M of business; SOC 2 and ISO 27001 compliance.

Technical Consultant, Web Platform — European Central Bank

Mar 2020 – Mar 2023

- Core CMS, website, intranet and extranet: job queue, user and group rights administration, staging → preview → live sync tool, and log management for auditable tracking of every operation.
- Content Security Policy against XSS and unauthorised access, SHA-256 TLS across Apache virtual hosts, security review of existing modules; Elasticsearch indexing content in 24 languages across millions of pages.

Senior Developer — European Commission

Apr 2018 – Jan 2020

- Main-site redesign: relational data model for tens of thousands of users, MySQL and Apache tuning, Drupal batch API tools; Jenkins / GitHub Actions CI/CD with Jest; several platform migrations; WCAG / ARIA accessibility.

EDUCATION

Computer Graphics & Multimedia Engineering — Instituto Politécnico de Viana do Castelo

Sep 2003 – Jun 2006

Escola Superior de Tecnologia e Gestão · 3-year Bacharelato (pre-Bologna undergraduate degree)

- C, C++ and Java with object-oriented design and real-time systems; real-time 3D graphics with OpenGL and DirectX; linear algebra, calculus and algorithms; IT security and networks.

Computer Technician (Informatics) — Escola Secundária de Pombal

Sep 2001 – Jun 2003

Programming foundations, SQL databases, Windows / Linux systems, networking and IT security

SELECTED STACK

Directus & Monospace: Data modelling, roles / policies / ACLs, Flows, hooks, endpoint and interface extensions, Visual Editor ([@directus/visual-editing](#)), webhooks, SDK, REST and GraphQL, multi-tenant setups, audit trails; Monospace SDK, CLI and MCP

Frontend & Mobile: Next.js, React, TypeScript; Flutter / Dart, React Native + Expo

Backend & Data: Node.js / TypeScript, Python (FastAPI), Go; PostgreSQL / PostGIS, Redis, Elasticsearch; Auth0 (OAuth2 / OIDC, JWT, RBAC)

Payments & Integrations: Stripe, MB WAY / Multibanco (ifthenpay), Odoo ERP, Google Calendar sync, supplier order APIs, OneSignal, n8n

Infra & Delivery: Docker / Compose, Kubernetes, Terraform, Ansible; Hetzner VPS and AWS; Linux hardening (systemd, Nginx / Apache, TLS); GitHub Actions, GitLab; Vitest, Jest

AVAILABILITY & RATE

- **Flexible engagement:** freelance, B2B or contract; remote (CET), hybrid or relocation; ready for a phase-one sprint.
- **Rate is negotiable:** happy to share expectations and a phase-one estimate by private message.
